PROFESSIONAL SUMMARY

Third-year B.Tech Computer Science Engineering (Data Science) student, passionate about Data Analytics, AI-assisted Development, and Full Stack Web Development. Experienced in building academic and hackathon projects using MongoDB, MySQL, JavaScript, HTML, CSS, and AI development tools such as Cursor, Claude, Kiro, Emergent, and Antigravity. Comfortable working with Python and Jupyter Notebook for data analysis and visualization. Looking for internship opportunities where I can strengthen my technical skills while contributing to real-world software and data-driven projects.

TECHNICAL SKILLS

Programming Languages: C, Python, JavaScript, HTML, CSS, R

Database: MySQL, MongoDB Compass

Data Analysis: Pandas, NumPy, Jupyter Notebook, Data Cleaning, Data Visualization, MS Excel/Spreadsheets

AI and Development Tools: Cursor AI, Claude, Kiro, Emergent, Antigravity, ChatGPT, GitHub Copilot, Git, GitHub, VS Code, MySQL Workbench

Core Concepts: Data Structures, Software Development Lifecycle, Operating System (Basic)

PROJECTS

Ikorra – AI Chatbot Web Application (In Development)

- Building a full-stack AI chatbot platform using the MERN stack (MongoDB, Express.js, React.js, Node.js), with a focus on real-time conversational UI and persistent chat history.
- Designing the MongoDB schema for user sessions and chat data, and developing REST APIs to connect the React front-end with the Node.js/Express backend.
- Using AI-assisted development tools (Kiro, Antigravity) to accelerate iteration and improve code quality during the build.

Spend Smart – Personal Finance Companion

- Developed a front-end personal finance web app focused on financial planning rather than simple expense logging, helping users visualize future spending patterns.
- Built core UI and interactive components using JavaScript, HTML5, and CSS3 with a focus on clean, responsive design.

ERP Clone – College ERP System (Front-End)

- Recreated the front-end interface of the college's ERP portal using HTML and CSS, replicating dashboard layouts, navigation, and key user views.
- Practiced structuring multi-page web layouts and translating a real-world enterprise UI into clean, semantic markup.

Datasets Analysis – Exploratory Data Analysis

- Performed exploratory data analysis on multiple datasets using Python (Pandas, NumPy) in Jupyter Notebook, including data cleaning, transformation, and summary statistics.
- Created visualizations to identify trends and patterns in the data, applying core data analyst workflows end-to-end.

EDUCATION

B.Tech, Computer Science Engineering – Specialization in Data Science

Expected 2028

Noida International University, Greater Noida, India

- Current CGPA: 8.62 (After 4th Semester)

CERTIFICATIONS & TRAINING

- Data Analytics Job Simulation – Deloitte (via Forage) | Completed June 2026 — covered data analysis, data modeling, data visualization, and forensic technology workflows
- Samsung Innovation Campus – Technical training program (organized in collaboration with college)
- MongoDB Hackathon – Participant, college-level hackathon focused on building MongoDB-backed applications

ACHIEVEMENTS & EXTRA-CURRICULAR

- Winner (1st Position) – Eureka E-Cell Hackathon (Team Event)
- Received official Winner Certificate for Eureka E-Cell Competition
- Awarded GitHub T-shirt for active contribution and participation during the Eureka E-Cell event
- Participated in multiple college hackathons and technical events
